

300mA Low Dropout Voltage Regulator

FEATURES

- 1% Output Accuracy 3.3V, 5V, at 300mA Output
- Very Low Quiescent Current
- 0.3V (Typ.) Dropout Voltage at 300mA
- Extremely Tight Load and Line Regulation
- Current & Thermal Limiting
- Reverse Battery Protection
- Equivalent Replacement For LT1521
- Available in RoHS Compliant, Lead Free Packages: TO-252, SOT-223, TO-220 & TO-263

DESCRIPTION

The SPX1521 is a low power voltage regulator. This device is an excellent choice for use in battery-powered applications such as cordless telephones, radio control systems, and portable computers. The SPX1521 features very low quiescent current and very low dropout voltage. This includes a tight initial tolerance of $\pm 1\%$ max, and very low output temperature coefficient, making the SPX1521 useful as a low-power voltage reference.

The SPX1521 is offered in 3 pin TO-252, SOT-223, TO-220 & TO-263 packages.

TYPICAL APPLICATIONS CIRCUIT

ABSOLUTE MAXIMUM RATINGS

Power Dissipation Internally Limited
 Lead Temp. (Soldering, 5 Seconds)..... 260°C
 Storage Temperature Range..... -65°C to +150°C
 Operating Junction Temperature Range -40°C to +125°C
 Input Supply Voltage..... -20V to +20V

Shutdown Input Voltage.....-0.6V to +6.5V
 ESD Rating.....2kV Min

ELECTRICAL CHARACTERISTICS

Electrical characteristics at $V_{IN} = 6V$, $I_O = 1mA$, $C_{OUT} = 2.2\mu F$, $T_A = 25^\circ C$, unless otherwise specified.
Boldface applies over the full operating temperature range.

PARAMETER	CONDITIONS (Note 2)	TYP	MIN	MAX	UNITS
3.3V Version					
Output Voltage	$1mA \leq I_L \leq 300mA$	3.3	3.267	3.333	V
		3.3	3.217	3.382	
Reverse Output Current	$V_{OUT} = 3.3V, V_{IN} = 0V$	16		25	μA
5.0V Version					
Output Voltage	$1mA \leq I_L \leq 300mA$	5.0	4.950	5.050	V
		5.0	4.880	5.120	
Reverse Output Current	$V_{OUT} = 5.0V, V_{IN} = 0V$	16		25	μA
All Voltage Options					
Output Voltage Temperature Coefficient	(Note1)	20		100	ppm/°C
Line Regulation	$6V \leq V_{IN} \leq 20V$ (Note 4)	1.5		20	mV
Load Regulation (Note 3)	$I_L = 1$ to 300mA	4		20 30	mV
Dropout Voltage (Note 5)	$I_L = 1mA$	0.13		0.17 0.25	V
	$I_L = 300mA$	0.30		0.55 0.70	
Ground Current	$I_L = 1mA$	100		150	μA
	$I_L = 10mA$	350		500	
	$I_L = 50mA$	1.5		3	mA
	$I_L = 100mA$ $I_L = 300mA$	2 5		6 14	
Current Limit	$V_{OUT} = 0$	330		500	mA
Ripple Rejection	$V_{IN} - V_{OUT} = 1V(Avg)$, $V_{RIPPLE} = 0.5Vp-p$, $F_{RIPPLE} = 120Hz, I_{LOAD} = 150mA$	58	50		dB
Input Reverse Leakage Current	$V_{IN} = -20V, V_{OUT} = 0V$			1.0	mA

Note 1: Output or reference voltage temperature coefficients defined as the worst case voltage change divided by the total temperature range.

Note 2: Unless otherwise specified all limits are guaranteed for $T_j = 25^\circ C$, $V_{IN} = 6V$, $I_L = 1mA$ and $C_L = 2.2\mu F$.

Note 3: Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.

Note 4: Line regulation for the SPX1521 is tested at $25^\circ C$ for $I_L = 1mA$. For $T_j = 125^\circ C$, line regulation is guaranteed by design.

Note 5: Dropout voltage is defined as the input to output differential at which the output voltage drops 100 mV below its nominal value measured at 1V differential.

External Capacitors

The stability of the SPX1521 requires a 2.2µF or greater capacitor between output and ground. Oscillation could occur without this capacitor. Most types of tantalum or aluminum electrolytic works fine here. For operations of below -25°C solid tantalum is recommended since the many aluminum types have electrolytes that freeze at about -30°C. The ESR of about 5Ω or less and resonant frequency above 500kHz are the most important parameters in the value of the capacitor. The capacitor value can be increased without limit.

The SPX1521, unlike other low dropout regulators will remain stable and in regulation with no load in addition to the internal voltage divider. This feature is especially important in applications like CMOS RAM keep-alive.

If there is more than 10 inches of wire between the input and the AC filter capacitor, or if a battery is used as the input, then a 0.1µF tantalum or aluminum electrolytic capacitor should be placed from the input to the ground.

Reducing Output Noise

It may be an advantage to reduce the AC noise present at the output. One way is to reduce the regulator bandwidth by increasing the size of the output capacitor. Increasing the capacitor from 1µF to 220µF only decreases the noise from 430µV to 160µVrms for a 100kHz bandwidth at 5V output.
