### **Typical Applications**

The HMC548LP3 / HMC548LP3E is ideal for:

- Automotive Telematics
- GPS Antenna Modules / Boosters
- Location Based Portables
- Satellite Navigation

## SiGe HBT MMIC LOW NOISE AMPLIFIER, 1.2 - 3.0 GHz

#### Features

Single Supply: Vcc = +3 to +5V Low Noise Figure: 1.3 dB High Output IP3: +21 dBm No External Matching Required External Filter Access 3x3 mm Leadless SMT Package

### **General Description**

The HMC548LP3 & HMC548LP3E are comprised of two internally matched SiGe HBT MMIC low noise amplifier stages housed in 3x3 mm leadless SMT packages. The unique topology of the HMC548LP3 & HMC548LP3E provides interstage access allowing the designer to place a bandpass filter between the two amplifier stages. This filtering approach enables the receiver to reject nearby blocking signals such as those emitted from cellular and 3G hand-helds, without incurring the noise figure degradation associated with a high rejection pre-filter. When combined with the appropriate interstage bandpass filter, this LNA can be used as a receiver pre-amplifier in various applications from 1.2 to 3 GHz. Evaluation boards are available with or without a GPS L1 (1575 MHz) band pass filter.

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed ground paddle should be connected directly to the ground plane similar to that shown above. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
