

3V W-CDMA BAND 1/5 DUAL BAND PA MODULE

Package Style: Module, 14-Pin, 4mmx5mmx1.0mm

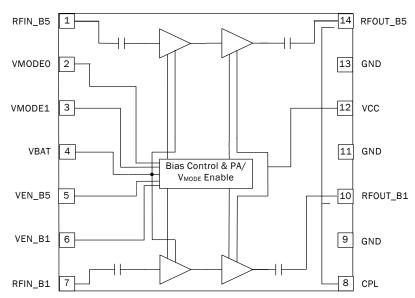

Features

- Dual-Band 1/5 UMTS PA
- HSDPA and HSPA+ Compliant
- Low Voltage Positive Bias Supply (3.0V to 4.2V)
- High Efficiency Operation: 41% at P_{OUT}=+28.0 dBm (Band 1) 41% at P_{OUT}=+28.0 dBm (Band 5) 19% at P_{OUT}=+19.0 dBm (without DC/DC converter)
- Low Quiescent Current in Low Power Mode: 16 mA
- Internal Voltage Regulator Eliminates the Need for External Reference Voltage (V_{RFF})
- Common V_{MODE} Control Lines
 Between Bands
- 3-Mode Power States for Each Band with Digital Control Interface
- Supports DC/DC Converter Operation (V_{CC} Pin)
- Integrated Power Coupler
- Integrated Blocking and Collector Decoupling Caps

Applications

- Dual-Band 1/5 UMTS Handsets and Data Cards
- WCDMA/HSDPA/HSUPA/ HSPA+ Wireless Handsets and Data Cards

Functional Block Diagram

Product Description

The RF7205 is a high-power, high-efficiency, dual-band, linear power amplifier designed for use as final amplification stages in 3V, 50Ω W-CDMA mobile cellular equipment and spread-spectrum systems. This PA is developed for UMTS Bands 1 and 5 which operates in the transmit frequency bands from 1920MHz to 1980MHz and 824MHz to 849MHz, respectively. The RF7205 uses two digital control pins to select one of three power modes to optimize performance and current drain at lower power levels. The part also has one integrated directional coupler output which eliminates the need for an external discrete coupler for each band. The RF7205 is fully HSDPA and HSPA+ compliant and is assembled on a 14-pin, $4\,\mathrm{mmx}5\,\mathrm{mm}$ laminate module.

Absolute Maximum Ratings

Parameter	Rating	Unit
r dramoto.	- rtating	Oilit
Supply Voltage in Standby Mode	6.0	V
Supply Voltage in Idle Mode	6.0	V
Supply Voltage in Operating Mode, 50Ω Load	6.0	V
Supply Voltage, V _{BAT}	6.0	V
Control Voltage, VMODE0, VMODE1	3.5	V
Control Voltage, V _{EN.B1} , V _{EN.B5}	3.5	V
RF - Input Power	+6	dBm
RF - Output Power	+30	dBm
Output Load VSWR (Ruggedness)	10:1	
Operating Ambient Temperature	-30 to +110	°C
Storage Temperature	-55 to +150	°C

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2002/95/EC (at time of this document revision).

Pin	Function	Description			
1	RFIN_B5	Band 5 RF input internally matched to 50Ω and DC blocked.			
2	VMODE0	gital control input for power mode selection (see operating modes truth table).			
3	VMODE1	Digital control input for power mode selection (see operating modes truth table).			
4	VBAT	Supply voltage for the first stage amplifier and bias circuitry.			
5	VEN_B5	Band 5 digital control for PA enable and disable (see operating modes truth table).			
6	VEN_B1	Band 1 digital control for PA enable and disable (see operating modes truth table).			
7	RFIN_B1	Band 1 RF input internally matched to 50Ω and DC blocked.			
8	CPL	Coupler output for both bands 1 and 5.			
9	GND	This pin must be grounded.			
10	RFOUT_B1	Band 1 RF output internally matched to 50Ω and DC blocked.			
11	GND	This pin must be grounded.			
12	VCC	Supply voltage for the second stage amplifier.			
13	GND	This pin must be grounded.			
14	RFOUT_B5	Band 5 RF output internally matched to 50Ω and DC blocked.			
Pkg Base	GND	Ground connection. The package backside should be soldered to a topside ground pad connecting to the PCB ground plane with multiple ground vias. The pad should have a low thermal resistance and low electrical impedance to the ground plane.			

Conditions/Comments	V _{EN_B1}	V _{EN_B5}	V _{MODEO}	V _{MODE1}	V_{BAT}	V _{CC}

Notes:

1. Shaded area represents Pin 1 location

Preliminary Application Schematic

- 1. VCC and VBAT are connected is DC-DC converter is not used.
 2. Place these capacitors as close to PA as possible.

PCB Design Requirements

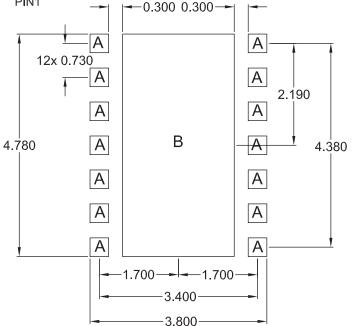

PCB Surface Finish

The PCB surface finish used for RFMD's qualification process is electroless nickel, immersion gold. Typical thickness is 3μ inch to 8μ inch gold over 180μ inch nickel.

PCB Land Pattern Recommendation

PCB land patterns for RFMD components are based on IPC-7351 standards and RFMD empirical data. The pad pattern shown has been developed and tested for optimized assembly at RFMD. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.

PCB Metal Land Pattern PIN1

A = 0.400 mm Sq Typ $B = 2.400 \times 4.780 \text{ mm Typ}$

Figure 1. PCB Metal Land Pattern (Top View)

PCB Solder Mask Pattern

Liquid Photo-Imageable (LPI) solder mask is recommended. The solder mask footprint will match what is shown for the PCB metal land pattern with a 2mil to 3mil expansion to accommodate solder mask registration clearance around all pads. The center-grounding pad shall also have a solder mask clearance. Expansion of the pads to create solder mask clearance can be provided in the master data or requested from the PCB fabrication supplier.

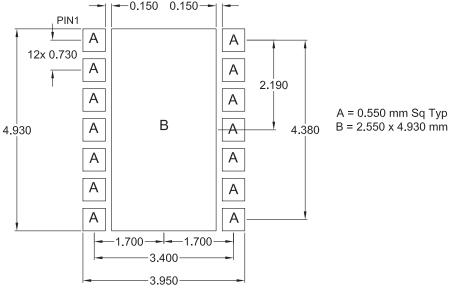

Figure 2. PCB Solder Mask Pattern (Top View)

Thermal Pad and Via Design

The PCB land pattern has been designed with a thermal pad that matches the die paddle size on the bottom of the device.

Thermal vias are required in the PCB layout to effectively conduct heat away from the package. The via pattern has been designed to address thermal, power dissipation and electrical requirements of the device as well as accommodating routing strategies.

The via pattern used for the RFMD qualification is based on thru-hole vias with 0.203mm to 0.330mm finished hole size on a 0.5mm to 1.2mm grid pattern with 0.025mm plating on via walls. If micro vias are used in a design, it is suggested that the quantity of vias be increased by a 4:1 ratio to achieve similar results.
