

PRELIMINARY DATA SHEET

SKY65386-11: 2620-2690 MHz Variable Gain Amplifier

Applications

- Base stations/transmit chains
- Repeater transmit chains
- Femto cells

Features

- Frequency range: 2620 to 2690 MHz
- High gain: 25.5 dB
- Attenuation range: 42 dB
- OP1dB: +28.5 dBm
- OIP3: +45.5 dBm
- ACLR < -70 dBc for P_{OUT} = +12 dBm
- Single DC supply: +5 V
- Small MCM (12-pin, 8.385 x 8.385 mm) SMT package (MSL3, 260 °C per JEDEC J-STD-020)

 Skyworks Pb-free products are compliant with all applicable legislation. For additional information, refer to *Skyworks Definition of Lead (Pb)-Free*, document number SQ04-0073.

Description

Skyworks SKY65386-11 is a high linearity, Variable Gain Amplifier (VGA). The device includes an input linear amplifier, a Variable Voltage Attenuator (VVA), and an output Power Amplifier (PA). The two amplifiers and voltage attenuator are optimized for superior ACLR performance with WCDMA signals.

The high linearity (high OP1dB, OIP3, and ACLR) and high efficiency of this device make it ideal for use at the final stage (or close to the final stage) of a wireless transmit chain.

The output of the first PA (PA1) is matched to the input of the VCA. The output of the VCA is matched to the input of the second PA (PA2). The RF_IN and RF_OUT signals (pins 1 and 8, respectively) are both internally matched, including DC blocking capacitors.

The SKY65386-11 VGA uses low-cost Surface Mount Technology (SMT) in the form of a compact, 8.385 x 8.385 mm 12-pin Multi-Chip Module (MCM), which allows for a highly manufacturable low-cost solution. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

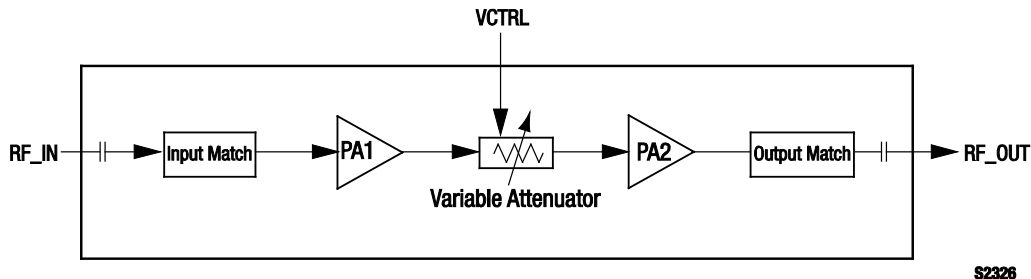

Figure 1. SKY65386-11 Block Diagram

Figure 2. SKY65386-11 Pinout – 12-Pin MCM (Top View)

Table 1. SKY65386-11 Signal Descriptions

| Pin # | Name | Description | Pin # | Name | Description |
|-------|-------|-------------------------------------|-------|----------|-----------------------------------------------------------------|
| 1 | RF_IN | RF input | 7 | GND | Ground |
| 2 | GND | Ground | 8 | RF_OUT | RF output |
| 3 | VCTRL | Variable attenuator control voltage | 9 | GND | Ground |
| 4 | GND | Ground | 10 | VCC_AMP2 | Voltage supply for PA2 (after the variable voltage attenuator) |
| 5 | GND | Ground | 11 | VCC_AMP1 | Voltage supply for PA1 (before the variable voltage attenuator) |
| 6 | GND | Ground | 12 | GND | Ground |

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY65386-11 are provided in Table 2. The recommended operating conditions are specified in Table 3 and electrical specifications are provided in Table 4.

Typical performance characteristics of the SKY65386-11 are illustrated in Figures 3 through 10.

Table 2. SKY65386-11 Absolute Maximum Ratings

| Parameter | Symbol | Minimum | Maximum | Units |
|----------------------------|-----------------------|---------|---------|-------|
| Supply voltage | VCC_AMP1, VCC_AMP2 | | 5.5 | V |
| Control voltage | V _{CTL} | | 5.0 | V |
| RF output power (CW) | P _{OUT} | | +29 | dBm |
| Thermal resistance | Θ _{JC} | | 38.6 | °C/W |
| Operating case temperature | T _C | -40 | +85 | °C |
| Storage case temperature | T _{STG} | -55 | +125 | °C |
| Junction temperature | T _J | | +150 | °C |

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Table 3. SKY65386-11 Recommended Operating Conditions

| Parameter | Symbol | Minimum | Typical | Maximum | Units |
|-----------------------------------------------------------|-----------------------|---------|---------|---------|-------|
| Frequency range | f | 2620 | | 2690 | MHz |
| RF output power (CW) | P _{OUT} | | | +25 | dBm |
| Supply voltage, measured at terminals of Evaluation Board | VCC_AMP1, VCC_AMP2 | 4.75 | 5.00 | 5.25 | V |
| Variable voltage attenuator control range | VCTRL | 0 | | 4.5 | V |
| Ruggedness, load VSWR with no permanent damage (@ P1dB) | P _{MAX_LOAD} | | | 10:1 | – |
| Operating case temperature | T _C | -30 | | +85 | °C |

Table 4. SKY65386-11 Electrical Specifications (Note 1)**(VCC_AMP1 = VCC_AMP2 = 5 V, VCTRL = 0 V, f = 2650 MHz, Tc = +25 °C, Characteristic Impedance [Zo] = 50 Ω, Unless Otherwise Noted)**

| Parameter | Symbol | Test Condition | Min | Typical | Max | Units |
|----------------------------------------------|-----------------|--------------------------------------------------------------------------------|------|-------------------------|------|----------------|
| Frequency range | f | | 2620 | | 2690 | MHz |
| Small signal gain | S21 | V _{CTL} = 0 V V _{CTL} = 3.0 V V _{CTL} = 3.3 V | | +25.5 -10.5 -16.5 | | dB dB dB |
| Gain control range | G_RANGE | CW | | 40 | | dB |
| Output 1dB Compression Point | OP1dB | CW | | +28.5 | | dBm |
| 3 rd Order Output Intercept Point | OIP3 | P _{TONE} = +12 dBm, Δf = 1 MHz | | +45.5 | | dBm |
| ACLR for P _{OUT} = +12 dBm | ACLR | WCDMA, test mode 1 | | -71.5 | | dBc |
| Noise Figure | NF | At maximum gain | | 3.9 | | dB |
| Input return loss | S ₁₁ | | | 17 | | dB |
| Output return loss | S ₂₂ | | | 14 | | dB |
| Quiescent current | I _Q | No RF | | 327 | | mA |
| Operating current | I _{OP} | P _{OUT} = +12 dBm | | 327 | | mA |
| Maximum VSWR for stable operation | VSWR_MAX | CW | | 8:1 | | - |

Note 1: Performance is guaranteed only under the conditions listed in this Table.

Evaluation Board Description

The Skyworks SKY65386-11 Evaluation Board is used to test the performance of the SKY65386-11 VGA. An Evaluation Board schematic diagram is provided in Figure 11. An assembly drawing for the Evaluation Board is shown in Figure 12 and the layer detail is provided in Figure 13. The layer detail physical characteristics are noted in Figure 14.

Capacitors C1, C2, and C3 provide DC bias decoupling and RF bypass for VCC_AMP1 (pin 11). Capacitors C4, C5, and C6 provide DC bias decoupling and RF bypass for VCC_AMP2 (pin 10). Capacitor C7 provides decoupling for VCTRL (pin 3).

Pins 1 and 8 are the RF input and output signals, respectively. Pins 2, 4, 5, 6, 7, 9, 12, and the package backside metal are ground pins that provide the DC, RF, and thermal ground.

Circuit Design Configurations

The following design considerations are general in nature and must be followed regardless of final use or configuration.

1. Proper isolation must be provided between the VCC_AMP1 and VCC_AMP2 pins.
2. Paths to ground should be made as short as possible.
3. The ground pad of the SKY65386-11 VGA has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the amplifier. As such, design the connection to the ground pad to dissipate the maximum wattage produced to the circuit board. Multiple vias to the grounding layer are required. Filled or capped vias are recommended.
4. It is recommended that the layout for the VCC_AMP1 and VCC_AMP2 signals follow what is shown in Figure 12. The VCC_AMP1 and VCC_AMP2 traces can be tied together to share the same power supply. The connecting node should not be placed close to the package pins. The connecting node should be connected closer to components C1 and C4 (see

Figure 11). This is to provide isolation between VCC_AMP1 and VCC_AMP2.

NOTE: Junction temperature (Tj) of the device increases with a poor connection to the slug and ground. This reduces the lifetime of the device.

Testing Procedure

Use the following procedure to set up the SKY65386-11 Evaluation Board for testing:

1. Connect a 5.0 V supply to the VCC_AMP1 and VCC_AMP2 pins. Connect the VCTRL signal to a power supply and set the power supply to 0 V. If available, enable the current limiting function of the power supply to 450 mA.
2. Connect a signal generator to the RF signal input port. Set it to the desired RF frequency at a power level of -20 dBm or less to the Evaluation Board but do NOT enable the RF signal.
3. Connect a spectrum analyzer to the RF signal output port.
4. Enable the power supply.
5. Enable the RF signal.
6. Take measurements.

CAUTION: *If any of the output signals exceed the rated maximum values, the SKY65386-11 Evaluation Board can be permanently damaged.*

Package and Handling Information

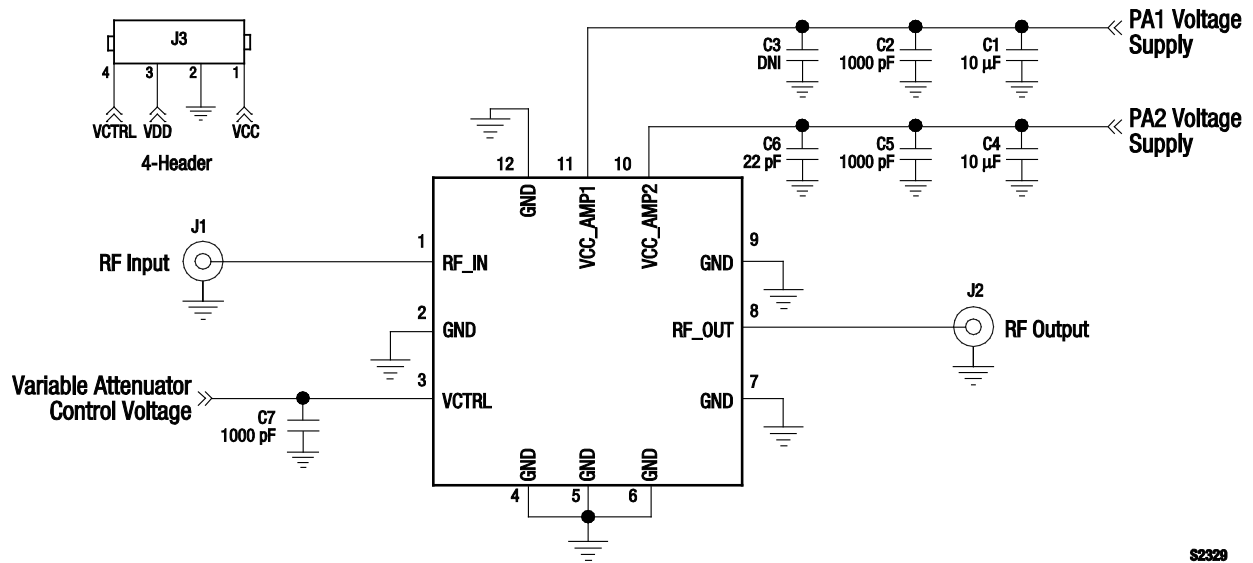

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY65386-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design & SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Package Dimensions

The PCB footprint drawing for the SKY65386-11 is shown in Figure 15. Package dimensions for the 12-pin MCM are shown in Figure 16, and tape and reel dimensions are provided in Figure 17.
