## 1 <br> Description

The ST3DV520 is a 16- to 8-bit bidirectional multiplexer/demultiplexer low $\mathrm{R}_{\mathrm{ON}}$ and high bandwidth switch suitable for analog video applications.
The ST3DV520 supports high definition (HD) analog video switching standards and is also suitable for general purpose switching that requires high signal integrity.

The device is designed for very low crosstalk, low bit-to-bit skew and low I/O capacitance. The signal from each input is multiplexed into one of two selected outputs while the unselected switch goes to $\mathrm{HI}-\mathrm{Z}$ status.

## 3 Maximum ratings

Stressing the device above the rating listed in the "Absolute Maximum Ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics ${ }^{\text {TM }}$ SURE program and other relevant quality documents.
