

HIGH-SIDE MEASUREMENT CURRENT SHUNT MONITOR

Check for Samples: [INA138-Q1](#), [IN168-Q1](#)

FEATURES

- Qualified For Automotive Applications
- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Complete Unipolar High-Side Current Measurement Circuit
- Wide Supply And Common-Mode Range
 - INA138: 2.7 V to 36 V
 - INA168: 2.7 V to 60 V
- Independent Supply and Input Common-Mode Voltages
- Single Resistor Gain Set
- Low Quiescent Current (25 μ A typ)
- Wide Temperature Range: -40°C to $+125^{\circ}\text{C}$
- TSSOP-8 and SOT23-5 Packages

APPLICATIONS

- Current Shunt Measurement
- Portable And Battery-Backup Systems
- Battery Chargers
- Power Management
- Precision Current Source

NC – No internal connection

DESCRIPTION

The INA138 and INA168 are high-side, unipolar, current shunt monitors. Wide input common-mode voltage range, low quiescent current, and tiny TSSOP and SOT23 packaging enable uses in a variety of applications.

Input common-mode and power-supply voltages are independent and can range from 2.7 V to 36 V for the INA138 and 2.7 V to 60 V for the INA168. Quiescent current is only 25 μ A, which permits connecting the power supply to either side of the current measurement shunt with minimal error.

The device converts a differential input voltage to a current output. This current is converted back to a voltage with an external load resistor that sets any gain from 1 to over 100. Although designed for current shunt measurement, the circuit invites creative applications in measurement and level shifting.

Both the INA138 and INA168 are available in TSSOP-8 and SOT23-5 and are specified for the -40°C to $+125^{\circ}\text{C}$ temperature range.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

ORDERING INFORMATION⁽¹⁾

PRODUCT	PACKAGE-LEAD	PACKAGE DESIGNATOR ⁽²⁾	SPECIFIED TEMPERATURE RANGE	PACKAGE MARKING	TRANSPORT MEDIA, QUANTITY
INA138QPWRQ1	TSSOP-8	PW	-40°C to +125°C	INA138	Tape and Reel, 2000
INA168QPWRQ1	TSSOP-8	PW	-40°C to +125°C	INA168	Tape and Reel, 2000
INA168QDBVRQ1	SOT23-5	DBV	-40°C to +125°C	LUIQ	Tape and Reel, 3000

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
- (2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		VALUE
Supply voltage, V_+	INA138-Q1	-0.3 V to 60 V
	INA168-Q1	-0.3 V to 75 V
Analog inputs, V_{IN+} , V_{IN-} , Common mode	INA138-Q1	-0.3 V to 60 V
	INA168-Q1	-0.3 V to 75 V
Analog inputs, $(V_{IN+}) - (V_{IN-})$, Differential		-40 V to 2 V
Analog output, out		-0.3 V to 40 V
Operating temperature		-55°C to 150°C
Storage temperature		-65°C to 150°C
Junction temperature		150°C
Thermal resistance, junction-to-ambient, $R_{\theta JA}$	PW	150°C/W
	DBV	200°C/W
Lead temperature (soldering, 10 seconds)		260°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

$T_A = -40^\circ\text{C}$ to 125°C , $V_S = 5\text{ V}$, $V_{IN+} = 12\text{ V}$, and $R_{OUT} = 125\text{ k}\Omega$ unless otherwise noted

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Input					
Full-scale sense voltage	$V_{SENSE} = V_{IN+} - V_{IN-}$		100	500	mV
Common-mode input range		INA138	2.7	36	V
		INA168	2.7	60	
Common-mode rejection	$V_{IN+} = 2.7\text{ V to }36\text{ V}$, $V_{SENSE} = 50\text{ mV}$	INA138	100	120	dB
	$V_{IN+} = 2.7\text{ V to }60\text{ V}$, $V_{SENSE} = 50\text{ mV}$	INA168	100	120	
Offset voltage ⁽¹⁾			± 0.2	± 2	mV
Offset voltage vs temperature			1		$\mu\text{V}/^\circ\text{C}$
Offset voltage vs power supply, V_+	$V_+ = 2.7\text{ V to }36\text{ V}$, $V_{SENSE} = 50\text{ mV}$	INA138	0.1	10	$\mu\text{V}/\text{V}$
	$V_+ = 2.7\text{ V to }60\text{ V}$, $V_{SENSE} = 50\text{ mV}$	INA168	0.1	10	

- (1) Defined as the amount of input voltage, V_{SENSE} , to drive the output to zero.

STEP RESPONSE

Figure 8.

APPLICATION INFORMATION

Figure 9 illustrates the basic circuit diagram for both the INA138 and INA168. Load current I_S is drawn from supply V_S through shunt resistor R_S . The voltage drop in shunt resistor V_S is forced across R_{G1} by the internal op amp, causing current to flow into the collector of Q1. External resistor R_L converts the output current to a voltage, V_{OUT} , at the OUT pin. The transfer function for the INA138 is:

$$I_O = g_m (V_{IN+} - V_{IN-})$$

where $g_m = 200 \mu\text{A/V}$.

In the circuit of Figure 9, the input voltage, $(V_{IN+} - V_{IN-})$, is equal to $I_S \times R_S$ and the output voltage, V_{OUT} , is equal to $I_O \times R_L$. The transconductance, g_m , of the INA138 is $200 \mu\text{A/V}$. The complete transfer function for the current measurement amplifier in this application is:

$$V_{OUT} = (I_S) (R_S) (200 \mu\text{A/V}) (R_L)$$

The maximum differential input voltage for accurate measurements is 0.5 V, which produces a $10 \mu\text{A}$ output current. A differential input voltage of up to 2 V will not cause damage. Differential measurements (pins 3 and 4) must be unipolar with a more-positive voltage applied to pin 3. If a more-negative voltage is applied to pin 3, the output current, I_O , will be zero, but it will not cause damage.

BASIC CONNECTION

Figure 9 shows the basic connection of the INA138. The input pins, V_{IN+} and V_{IN-} , should be connected as closely as possible to the shunt resistor to minimize any resistance in series with the shunt resistance. The output resistor, R_L , is shown connected between pin 1 and ground. Best accuracy is achieved with the output voltage measured directly across R_L . This is especially important in high-current systems where load current could flow in the ground connections, affecting the measurement accuracy.

No power-supply bypass capacitors are required for stability of the INA138. However, applications with noisy or high-impedance power supplies may require decoupling capacitors to reject power-supply noise. Connect bypass capacitors close to the device pins.

POWER SUPPLIES

The input circuitry of the INA138 can accurately measure beyond its power-supply voltage, $V+$. For example, the $V+$ power supply can be 5 V, whereas the load power supply voltage is up to +36 V (or +60 V with the INA168). The output voltage range of the OUT terminal, however, is limited by the lesser of the two voltages (see Output Voltage Range section).

SELECTING R_S AND R_L

The value chosen for the shunt resistor, R_S , depends on the application and is a compromise between small-signal accuracy and maximum permissible voltage loss in the measurement line. High values of R_S provide better accuracy at lower currents by minimizing the effects of offset, while low values of R_S minimize voltage loss in the supply line. For most applications, the best performance is attained with an R_S value that provides a full-scale shunt voltage range of 50 mV to 100 mV. Maximum input voltage for accurate measurements is 500 mV.

R_L is chosen to provide the desired full-scale output voltage. The output impedance of the INA138 OUT terminal is very high which permits using values of R_L up to 500 k Ω with excellent accuracy. The input impedance of any additional circuitry at the output should be much higher than the value of R_L to avoid degrading accuracy.

Some analog-to-digital (A/D) converters have input impedances that significantly affects measurement gain. The input impedance of the A/D converter can be included as part of the effective R_L if its input can be modeled as a resistor to ground. Alternatively, an op amp can be used to buffer the A/D converter input. Figure 9 shows the recommended values of R_L .

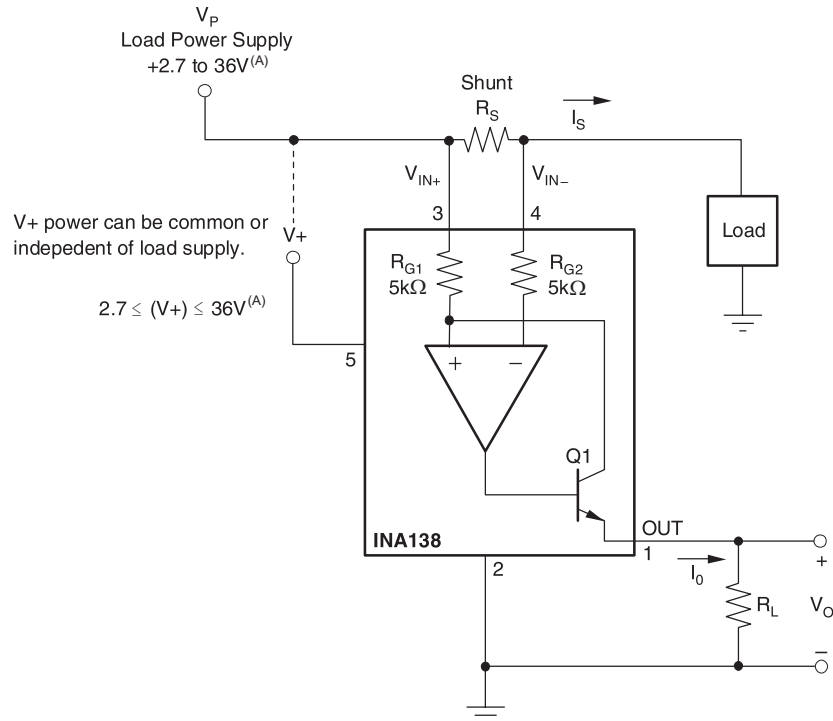

Figure 9. Basic Circuit Connections

OUTPUT VOLTAGE RANGE

The output of the INA138 is a current, which is converted to a voltage by the load resistor, R_L . The output current remains accurate within the compliance voltage range of the output circuitry. The shunt voltage and the input common-mode and power-supply voltages limit the maximum possible output swing. The maximum output voltage compliance is limited by the lower of the two equations below:

$$V_{out\ max} = (V_+) - 0.7\ V - (V_{IN+} - V_{IN-})$$

or

$$V_{out\ max} = V_{IN-} - 0.5\ V$$

(whichever is lower)

BANDWIDTH

Measurement bandwidth is affected by the value of the load resistor, R_L . High gain produced by high values of R_L yields a narrower measurement bandwidth (see the Typical Characteristics section). For widest possible bandwidth, keep the capacitive load on the output to a minimum. Reduction in bandwidth due to capacitive load is shown in the Typical Characteristics section.

If bandwidth limiting (filtering) is desired, a capacitor can be added to the output (see Figure 12). This will not cause instability.

APPLICATIONS

The INA138 is designed for current shunt measurement circuits, as shown in Figure 9, but its basic function is useful in a wide range of circuitry. An engineer may find many unforeseen uses in measurement and level shifting circuits. A few ideas are illustrated in Figure 10 through Figure 15.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
