

FEATURES

- Complete PWM Power-Control Circuitry
- Uncommitted Outputs for 200-mA Sink or Source Current
- Output Control Selects Single-Ended or Push-Pull Operation
- Internal Circuitry Prohibits Double Pulse at Either Output
- Variable Dead Time Provides Control Over Total Range
- Internal Regulator Provides a Stable 5-V Reference Supply Trimmed to 1%
- Circuit Architecture Allows Easy Synchronization
- Undervoltage Lockout for Low- V_{CC} Conditions

DESCRIPTION/ORDERING INFORMATION

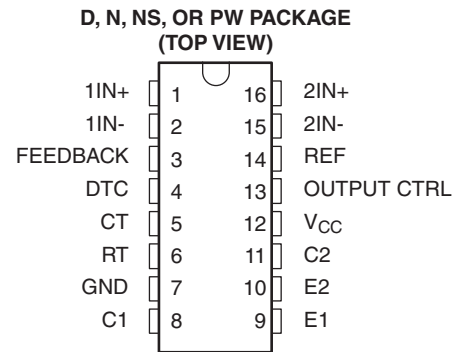

The TL594 incorporates all the functions required in the construction of a pulse-width-modulation (PWM) control circuit on a single chip. Designed primarily for power-supply control, this device offers the systems engineer the flexibility to tailor the power-supply control circuitry to a specific application.

The TL594 contains two error amplifiers, an on-chip adjustable oscillator, a dead-time control (DTC) comparator, a pulse-steering control flip-flop, a 5-V regulator with a precision of 1%, an undervoltage lockout control circuit, and output control circuitry.

The error amplifiers have a common-mode voltage range of -0.3 V to $V_{CC} - 2\text{ V}$. The DTC comparator has a fixed offset that provides approximately 5% dead time. The on-chip oscillator can be bypassed by terminating RT to the reference output and providing a sawtooth input to CT, or it can be used to drive the common circuitry in synchronous multiple-rail power supplies.

The uncommitted output transistors provide either common-emitter or emitter-follower output capability. Each device provides for push-pull or single-ended output operation, with selection by means of the output-control function. The architecture of these devices prohibits the possibility of either output being pulsed twice during push-pull operation. The undervoltage lockout control circuit locks the outputs off until the internal circuitry is operational.

The TL594C is characterized for operation from 0°C to 70°C . The TL594I is characterized for operation from -40°C to 85°C .

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

TL594 PULSE-WIDTH-MODULATION CONTROL CIRCUIT

SLVS052G—APRIL 1988—REVISED JANUARY 2007

ORDERING INFORMATION⁽¹⁾

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
 (2) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

FUNCTION TABLE

INPUT	OUTPUT FUNCTION
OUTPUT CTRL	
$V_I = 0$	Single-ended or parallel output
$V_I = V_{ref}$	Normal push-pull operation

FUNCTIONAL BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		VALUE	UNIT
V _{CC}	Supply voltage ⁽²⁾	41	V
	Amplifier input voltage	V _{CC} + 0.3	V
	Collector output voltage	41	V
	Collector output current	250	mA
θ _{JA}	Package thermal impedance ⁽³⁾⁽⁴⁾	D package	73
		N package	67
		NS package	64
		PW package	108
T _J	Operating virtual junction temperature	150	°C
T _{stg}	Storage temperature range	–65 to 150	°C

- (1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential voltages, are with respect to the network ground terminal.
- (3) Maximum power dissipation is a function of T_{J(max)}, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_{J(max)} – T_A)/θ_{JA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

RECOMMENDED OPERATING CONDITIONS

		MIN	MAX	UNIT
V _{CC}	Supply voltage	7	40	V
V _I	Amplifier input voltage	–0.3	V _{CC} – 2	V
V _O	Collector output voltage		40	V
	Collector output current (each transistor)		200	mA
	Current into FEEDBACK terminal		0.3	mA
C _T	Timing capacitor	0.47	10000	nF
R _T	Timing resistor	1.8	500	kΩ
f _{osc}	Oscillator frequency	1	300	kHz
T _A	Operating free-air temperature	TL594C	0	70
		TL594I	–40	85

ELECTRICAL CHARACTERISTICS

V_{CC} = 15 V, over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS ⁽¹⁾	MIN	TYP ⁽²⁾	MAX	UNIT
Reference Section					
Output voltage (REF)	I _O = 1 mA, T _A = 25°C	4.95	5	5.05	V
Input regulation	V _{CC} = 7 V to 40 V, T _A = 25°C		2	25	mV
Output regulation	I _O = 1 mA to 10 mA, T _A = 25°C		14	35	mV
Output-voltage change with temperature	ΔT _A = MIN to MAX		2	10	mV/V
Short-circuit output current ⁽³⁾	V _{ref} = 0	10	35	50	mA
Amplifier Section (see Figure 1)					
Input offset voltage, error amplifier	FEEDBACK = 2.5 V		2	10	mV
Input offset current	FEEDBACK = 2.5 V		25	250	nA
Input bias current	FEEDBACK = 2.5 V		0.2	1	μA
Common-mode input voltage range, error amplifier	V _{CC} = 7 V to 40 V	0.3 to V _{CC} - 2			V
Open-loop voltage amplification, error amplifier	ΔV _O = 3 V, R _L = 2 kΩ, V _O = 0.5 V to 3.5 V	70	95		dB
Unity-gain bandwidth	V _O = 0.5 V to 3.5 V, R _L = 2 kΩ		800		kHz
Common-mode rejection ratio, error amplifier	V _{CC} = 40 V, T _A = 25°C	65	80		dB
Output sink current, FEEDBACK	V _{ID} = -15 mV to -5 V, FEEDBACK = 0.5 V	0.3	0.7		mA
Output source current, FEEDBACK	V _{ID} = 15 mV to 5 V, FEEDBACK = 3.5 V	-2			mA
Oscillator Section, C_T = 0.01 μF, R_T = 12 kΩ (see Figure 2)					
Frequency			10		kHz
Standard deviation of frequency ⁽⁴⁾	All values of V _{CC} , C _T , R _T , and T _A constant		100		Hz/kHz
Frequency change with voltage	V _{CC} = 7 V to 40 V, T _A = 25°C		1		Hz/kHz
Frequency change with temperature ⁽⁵⁾	ΔT _A = MIN to MAX			50	Hz/kHz
Dead-Time Control Section (see Figure 2)					
Input bias current	V _I = 0 to 5.25 V		-2	-10	μA
Maximum duty cycle, each output	DTC = 0 V	0.45			
Input threshold voltage	Zero duty cycle		3	3.3	V
	Maximum duty cycle	0			
Output Section					
Collector off-state current	V _C = 40 V, V _E = 0 V, V _{CC} = 40 V		2	100	μA
	DTC and OUTPUT CTRL = 0 V, V _C = 15 V, V _E = 0 V, V _{CC} = 1 V to 3 V		4	200	
Emitter off-state current	V _{CC} = V _C = 40 V, V _E = 0			-100	μA
Collector-emitter saturation voltage	Common emitter, V _E = 0, I _C = 200 mA		1.1	1.3	V
	Emitter follower, V _C = 15 V, I _E = -200 mA		1.5	2.5	
Output control input current	V _I = V _{ref}			3.5	mA

(1) For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

(2) All typical values, except for parameter changes with temperature, are at T_A = 25°C.

(3) Duration of the short circuit should not exceed one second.

(4) Standard deviation is a measure of the statistical distribution about the mean, as derived from the formula:

$$\sigma = \sqrt{\frac{\sum_{n=1}^N (x_n - \bar{X})^2}{N - 1}}$$

(5) Temperature coefficient of timing capacitor and timing resistor is not taken into account.

ELECTRICAL CHARACTERISTICS (continued)

$V_{CC} = 15\text{ V}$, over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS ⁽¹⁾	MIN	TYP ⁽²⁾	MAX	UNIT
PWM Comparator Section (see Figure 2)					
Input threshold voltage, FEEDBACK	Zero duty cycle		4	4.5	V
Input sink current, FEEDBACK	FEEDBACK = 0.5 V	0.3	0.7		mA
Undervoltage Lockout Section (see Figure 2)					
Threshold voltage	$T_A = 25^\circ\text{C}$			6	V
	$\Delta T_A = \text{MIN to MAX}$	3.5		6.9	
Hysteresis ⁽⁶⁾		100			mV
Overall Device					
Standby supply current	R_T at V_{ref} , All other inputs and outputs open	$V_{CC} = 15\text{ V}$	9	15	mA
		$V_{CC} = 40\text{ V}$	11	18	
Average supply current	DTC = 2 V, See Figure 2		12.4		mA

(6) Hysteresis is the difference between the positive-going input threshold voltage and the negative-going input threshold voltage.

SWITCHING CHARACTERISTICS

$V_{CC} = 15\text{ V}$, $T_A = 25^\circ\text{C}$, over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Output-voltage rise time	Common-emitter configuration (see Figure 3)		100	200	ns
Output-voltage fall time				30	100
Output-voltage rise time	Emitter-follower configuration (see Figure 4)		200	400	ns
Output-voltage fall time				45	100

APPLICATION INFORMATION

How to Set Dead Time

The primary function of the dead-time control is to control the minimum off time of the output of the TL594. The dead-time control input provides control from 5% to 100% dead time. The TL594 can be tailored to the specific power transistor switches that are used, to ensure that the output transistors never experience a common on-time. The bias circuit for the basic function is shown in [Figure 7](#).

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
