Description

The TriQuint TGA8652-SL is a medium power wideband AGC amplifier combined with off chip circuitry assembled in a Surface Mount Package. The TGA8652-SL typically provides 16dB small signal gain with 6dB AGC range. Typical input and output return loss is <10dB. Typical Noise Figure is 2.5dB at 3GHz. Typical saturated output power is 25dBm. Small signal 3dB BW is 12GHz with saturated power performance to 16GHz. RF ports are DC coupled enabling the user to customize system corner frequencies. Applications include OC192 12.5GBit/s NRZ MZ Modulator Driver and receive AGC amplifier.

Drain bias may be applied thru the on-chip drain termination resistor for low drive applications or thru the RF output port for high drive applications. A cascaded pair demonstrated 8Vpp output voltage swing with 500mVpp at the input when stimulated with 10GBit/s. 2^31-1prbs. NRZ data.

The TGA8652-SL is available on an evaluation board.

Recommended Surface Mount Package Assembly

Proper ESD precautions must be followed while handling packages.

Clean the board with acetone. Rinse with alcohol. Allow the circuit to fully dry.

TriQuint recommends using a conductive solder paste for attachment. Follow solder paste and reflow oven vendors' recommendations when developing a solder reflow profile. Typical solder reflow profiles are listed in the table below.

Hand soldering is not recommended. Solder paste can be applied using a stencil printer or dot placement. The volume of solder paste depends on PCB and component layout and should be well controlled to ensure consistent mechanical and electrical performance. *This package has little tendency to self-align during reflow*.
