

# STEVAL-IFS004V1

## Metal body proximity detector based on the TDE0160

Data Brief

### Features

- Supply voltage: +4 V to +36 V
- Supply current: <1.2 mA
- Loss resistance: 5 k $\Omega$  to 50 k $\Omega$
- Oscillator frequency: <1 MHz
- Output transistor:  $I_C = 20$  mA,  $V_{CE(sat)} < 1.1$  V

### Description

This demonstration board is based on the TDE0160, a device designed to detect metal bodies using the effect of eddy currents on the HF losses of a coil. It has two complementary open collector outputs with peak limiting. Hysteresis is adjustable, and an electronic switching circuit is incorporated for disabling both outputs. An internal Zener diode maintains “dipole” operation of the supply voltage to the circuit.
