LTC4360/LTC4361/LTC4362 Overvoltage/Overshoot Protection Controllers

The LTC[®]4360/LTC[®]4361/LTC[®]4362 are overvoltage protection devices designed to safeguard low voltage, portable electronics from damaging input voltage transients and current surges. The LTC4360/LTC4361 utilize a 2% accurate 5.8V overvoltage threshold to detect an overvoltage event and responds within 1µs to isolate the downstream components from the input. Overvoltage protection of up to 80V can be achieved with this simple IC/MOSFET solution without the need for additional protection components. In addition the LTC4361 offers a 10% accurate overcurrent circuit breaker. The LTC4362 is a 1.2A overvoltage/overcurrent protector that includes an internal 40mΩ N-channel MOSFET and current sense resistor in series with the input power supply. All three products offer a GATEP output pin for controlling an additional P-channel MOSFET to provide negative input voltage protection.

Applications

- USB Protection
- Cell/Smart Phones
- MP3/MP4 Players
